

Plastic air supply and exhaust valve

KPP

Description

KPP air valves are designed for air supply and exhaust systems. They are made from white PVC and as a result, they are corrosion-resistant. The air flow rate is adjusted by twisting the disk closure in and out of the bezel. The opening ratio is fixed with a locknut. The carefully designed geometry of the valve guarantees low noise levels. The KPP air valve is fastened to the ductwork end via a mounting frame. The KPP valve only needs to be press-fitted in the mounting frame.
